CLIMATE CONTROL

Garden Rooms | Summerhouses | Studios

If you thought air conditioning was just for cooling you should think again, because modern inverter systems use heat pump technology to deliver both cooling and heating. In fact, when compared to conventional electric heaters, air conditioning heat pumps can save around 78% on heating bills, producing up to 5 times the amount of heat energy for every kilowatt of electricity they use.

With energy costs rising and temperatures soaring, air conditioning is the only solution that can reduce energy bills whilst maintaining comfortable room temperatures all year round.

Buying an air conditioning system from Worcestershire Garden Buildings is a sure guarantee that the system you choose will be expertly designed to meet all your cooling and heating requirements.

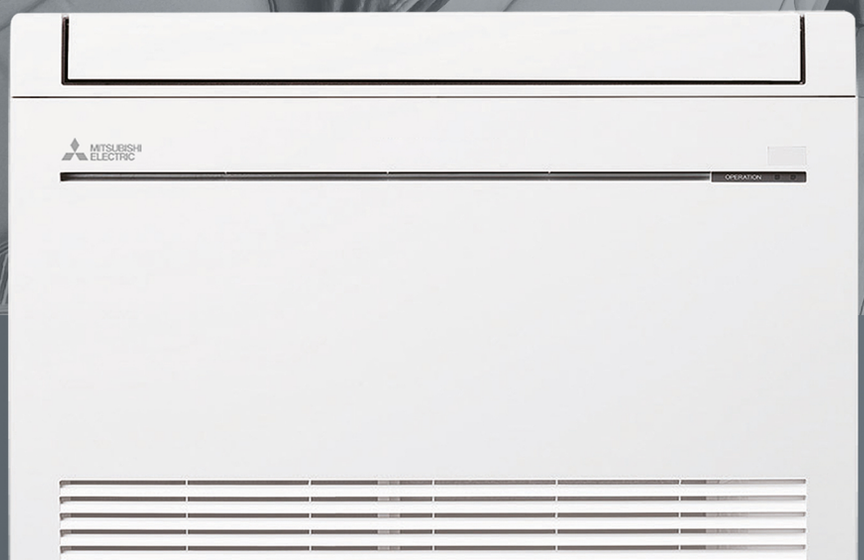

Our systems are professionally installed by qualified FGAS engineers who test and commission beyond recommended industry guidelines to ensure maximum performance, efficiency and long-term reliability.

Indoor Units - High Wall

High wall indoor fan units are designed to draw air through the top, which passes through a filtration system before entering the fan coil. Air is then heated or cooled according to the mode setting and blown back into the room via controllable flaps. High wall units provide unrestricted room coverage and help to save essential floorspace in garden rooms.

Indoor Units - Low Wall

Low wall indoor fan units draw air through a front fascia panel, which passes through a filtration system before entering the fan coil. Air is then heated or cooled according to the mode setting and blown back into the room through controllable flaps at the top of the unit. These systems are an ideal alternative for mounting under windows and other low wall areas.

All systems are supplied with a 5-year manufacturers warranty for replacement parts, plus a 3-year parts and labour warranty for interconnecting pipework, cabling and accessories.

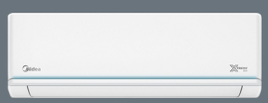

Manufacturers warranties are subject proven service records, which must be maintained on an annual basis by an WGB approved engineer.

Annual service costs range from £95.00 plus vat, which are subject to a 50% discount at the end of the first year, courtesy of Worcestershire Garden Buildings.

Mitsubishi MFZ-KT

The MFZ-KT low wall series offers superior performance, efficiency and low noise operation and is built with commercial grade reliability. Available in 3 model sizes ranging from 2.5kw up to 5.0kw and compatible with Mitsubishi's MXZ multi-split series, MFZ-KT is ideal for single and multi-room applications. With its flat asymmetrical case design, advanced 3-vane louvre and auto-swing shutter system, MFZ-KT is ideal for any room requiring a low wall/floor-mounted solution.

Features Include:-

- Low Wall/Floor Mounting System
- Flat Asymmetrical Case Design
- Optional Wi-Fi Control
- Unique 3 Vane Design
- Swing Vane Mode & Autovane Shutter
- In-built 7-Day Timeclock
- ErP Energy Class (Cooling) A++
- ErP Energy Class (Heating) A+
- Compatible With MXZ Multi-split Series
